R. "Generation and initial analysis of more than 15,000 full-length RT Muman and mouse cDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

C. -- SUBCELLULAR LOCATION: Integral membrane protein.

C. -- SUBCELLULAR LOCATION: Integral membrane protein.

C. -- PTM: This protein is not N-glycosylated which is unusual for G-protein-coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. Science 287:2274-2277(2000).

-!- FUNCTION: Receptor for the CX3C chemokine fractalkine and media both its adhesive and migratory functions. Acts as co-receptor with CD4 for HTV-1 virus envelope protein (in vitro).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUB SPECIFICITY: Expressed in lymphoid and neural tissues.
-!- DISEASE: Increased susceptibility to HIV infection and rapid progression to AIDS are associated with the Ile-249/Met-280 haplotype.
                                                                                                                                                                                                                                                            -!- SIMILARÎTY: Belongs to family 1 of G-protein coupled receptors.

calculudate second messaging is specification and configuration mediate of correceptor for some primary HIV-2 isolates. In the CNS, could mediate hippocampal-neuron survival.

-!- SUBCELLUDAR LOCATION: Integral membrane protein.
-!- SUBCELLUDAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Predominantly expressed in the thymus, in peripheral blood Leukcoytes, including T cells, mostly odds cells, and in monocytes. Detected also in macrophages, IL-2-activated and in monocytes. Detected also in macrophages, IL-2-activated natural killer cells and skin-homing memory T cells, mostly the ones expressing the cutaneous lymphocyte antigen (CLA). Expressed in brain microvascular and coronary artery endothelial cells.
-- PTM: IN NATURAL KILLER CELLS, SCYA22 BINDING INDUCES
-- PTM: IN NATURAL KILLER CELLS, SCYA22 BINDING INDUCES
-- PTM: BY BETA-ADRENERGIC RECEPTOR KINASES 1 AND 2.
-- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MIM) 604836; --

-!- FUNCTION: RECEPTOR FOR A C-C TYPE CHEMOKINE. BINDS TO MIP-1-ALPHA, RANTES. MCP-3 AND, LESS BFFICIENTLY, TO MIP-1-BETA OR MCP-1 AND SUBSEQUENTLY TRANSDUCES A SIGNAL BY INCREASING THE INTRACELLULAR CALCHUM IONS LEVEL. RESPONSIBLE FOR AFFECTING STEM CELL PROLIFERATION.

"Cloning and characterization of the guinea pig eosinophil ectaxin receptor, C-C chemokine receptor-3: blockade using a monoclonal antibody in vivo.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     J. Immunol. 161:6139-6147(1998).

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to ectaxin, MCP-3, MCP-4 and RANTES and subsequently transduces a signal by increasing the intracellular calcum ions level (By similarity)
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                    30-MAY-2000 (Rel. 39, Created)

TISSUE SPECIFICITY: Detected in the heart, spleen, lung,
peritoneal exudate cells and leukocytes.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

functional macrophage inflammatory protein-1 alpha receptor.";
J. Biol. Chem. 270:17494-17501(1995).
--- FUNCTION: Probable receptor for a C-C type chemokine.
---- SUBCELLULAR LOCATION: Integral membrane protein.
---- TISSUE SPECIFICITY: Detected in the spleen, liver and leukocytes.
---- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                  55.8%; Score 53; DB 1; Length 356; 50.0%; Pred. No. 0.13; tive 4; Mismatches 5; Indels
